

Innovation is part of the Diggia group's DNA, being one of the most important pillars in the development of new projects.

It is the cornerstone of the company, generating real value to our citizens, governments through solutions that constantly improve their daily lives with operational excellence.

We develop the sustainable innovation strategy and objectives in conjunction with the commercial and investment growth plan.

Our organization has implemented an Innovation System based on the ISO 56001 standard through Innovation in telecommunications, energy storage systems and smart cities, renewable energies, smart grids and energy management systems, software for the development of monitoring and control platforms, charging and their management of electric vehicles.

The Management shows its commitment to Innovation:

- Promoting the implementation of innovation projects that strengthen the business lines of our organization.
- Applying the principles of excellence; social, environmental and sustainability criteria, and the company's ethical values also to the execution of innovation projects.
- Improving internal processes and innovation project management tools to be more efficient.
- Promoting the establishment of collaborations with relevant partners and suppliers, generating mutual benefits and added value.
- Providing the necessary resources to maintain and improve the portfolio of innovation projects.
- Promoting an innovative culture in the organization, involving all staff in the generation of ideas and creating a brand image based on innovation.
- Communicating the technological capabilities of the organization both internally and externally with the aim of both attracting new customers and collaborators for future projects.
- Developing external financing mechanisms for innovation, either by resorting to public aid sources or by making the knowledge acquired in innovation projects profitable.
- Guaranteeing the protection of the results generated within the framework of innovation projects by applying the best available mechanisms for the protection of intellectual property.
- Guaranteeing the exploitation of innovation results within the organization, encouraging their introduction in other projects.
- Increasing stakeholder satisfaction through the effective application of its internal management systems, complying with both the requirements that they themselves establish and those legal, regulatory and specific requirements of our Innovation Management System, promoting continuous improvement.

The scope of application of this policy covers all the company's locations.

Approved by the Systems, Processes and Support Department.
